

MANAGEMENT'S DISCUSSION AND ANALYSIS

The following discussion and analysis as provided by the management of Raging River Exploration Inc. ("Raging River" or the "Company") is dated November 8, 2016 and should be read in conjunction with the unaudited interim financial statements for the three and nine months ended September 30, 2016 and the audited financial statements for the year ended December 31, 2015 and the notes thereto. The interim financial statements have been prepared in accordance with International Accounting Standard ("IAS") 34 – "Interim Financial Reporting" using accounting policies consistent with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). All dollar amounts are referenced in Canadian dollars, except when noted otherwise.

Forward Looking Statements

This Management Discussion and Analysis ("MD&A") may include forward-looking statements including opinions, assumptions, estimates and management's assessment of future plans and operations, details of the 2016 capital budget including expected total capital expenditures in 2016, expected sources of funding for the Company's 2016 capital budget, future drilling locations, expectations that the Company will not pay cash taxes in 2016, expectations that the Company will have adequate liquidity to fund operations and capital expenditures and expected sources of financing for any expansion of the capital program or any significant acquisition that may be undertaken by the Company. When used in this document, the words "anticipate", "believe", "estimate", "expect", "intent", "may", "project", "plan", "should" and similar expressions are intended to be among the statements that identify forward-looking statements. Forward-looking statements are subject to a wide range of risks and uncertainties, and although the Company believes that the expectations represented by such forward-looking statements are reasonable, there can be no assurance that such expectations will be realized. The forward-looking statements contained herein are based on certain key expectations and assumptions made by the Company, including but not limited to expectations and assumptions concerning including but not limited to expectations and assumptions with respect to the success of optimization and efficiency improvement projects, the availability of capital, current legislation, pipeline capacity, receipt of required regulatory approval, the success of future drilling and development activities, the performance of existing wells, the performance of new wells, Raging River's growth strategy, general economic conditions, availability of required equipment and services and the costs of obtaining such equipment and services, and prevailing commodity prices. Any number of important factors could cause actual results to differ materially from those in the forward-looking statements, including, but not limited to, risks associated with petroleum and natural gas, exploration, development, exploitation, production, marketing and transportation, the volatility of petroleum and natural gas prices, currency fluctuations, the ability to implement corporate strategies, the state of domestic capital markets, the ability to obtain financing, incorrect assessments of the value of acquisitions, failure to realize the anticipated benefits of acquisitions, changes in petroleum and natural gas acquisition and drilling programs, delays resulting from inability to obtain required regulatory approvals, delays resulting from other producers, imprecision or reserve estimates, labour supply risks, environmental risks, competition from other producers, changes in general economic conditions, whether farm-in and farm-out opportunities result in agreements and other factions more fully described from time to time in the reports and filings made by the Company with securities regulatory authorities including the Company's most recent annual information form. Statements relating to "reserves" or "resources" are deemed to be forward looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the resources and reserves described can be profitably produced in the future. The forward looking statements contained in this MD&A are expressly qualified by this cautionary statement. Readers are cautioned not to place undue reliance on forward-looking statements, as no assurances can be given as to future results, levels of activity or achievements. Except as required by applicable securities laws, the Company does not undertake any obligation to publicly update or revise any forward-looking statements.

Non-GAAP Measures

The MD&A contains the term funds flow from operations which should not be considered an alternative to, or more meaningful than, cash flow from operating activities as determined in accordance with IFRS as an indicator of the Company's performance. The reconciliation between cash flow from operating activities and funds flow from operations can be found in the statement of cash flows in the unaudited interim financial statements and is presented before the change in non-cash operating working capital. The Company reconciles funds flow from operations to cash flow from operating activities, which is the most directly comparable measure calculated in accordance with IFRS, as follows:

	Three months ended September 30,		Nine months ended, September 30,	
	2016	2015	2016	2015
	<i>(thousands of dollars)</i>		<i>(thousands of dollars)</i>	
Cash flow from operating activities	49,025	48,907	113,835	99,680
Changes in non – cash working capital	701	(5,277)	9,793	26,964
Funds flow from operations	49,726	43,630	123,628	126,644

The Company presents funds flow from operations per share whereby per share amounts are calculated consistent with the calculation of earnings per share.

The MD&A contains other terms such as net debt, operating netbacks and funds flow netbacks, which are not recognized measures under IFRS. Management believes these measures are useful supplemental measures of firstly, the total amount of current and long-term debt the Company has, secondly, the amount of revenues received on a per unit of production basis after the royalties, operating and transportation costs and thirdly, the amount of revenues received on a per unit of production basis after the royalties, operating and transportation costs, general and administrative expenses, financial charges, asset retirement expenditures and current taxes. Net debt represents current assets less current liabilities and bank debt and is used to assess efficiency, liquidity and the general financial strength of the Company. Mark-to-market risk management contracts are excluded from the net debt calculation. Readers are cautioned however, that these measures should not be construed as an alternative to other terms such as current and long-term debt or net earnings in accordance with IFRS as measures of performance. The Company's method of calculating these measures may differ from other companies and accordingly such measures may not be comparable to measures used by other companies.

Barrels of Oil Equivalent

The term barrels of oil equivalent (“boe”) may be misleading, particularly if used in isolation. Per boe amounts have been calculated using a conversion rate of six thousand cubic feet of natural gas to one barrel of oil. This equivalence is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a conversion on a 6:1 basis may be misleading as an indication of value.

Drilling Locations

This MD&A discloses certain drilling locations associated with the Company's acquisition of certain assets in the Forgan area and the Rock Acquisition (as defined herein). Such drilling locations are considered unbooked locations as they do not have attributed reserves or resources. Unbooked locations have been identified by management as an estimation of our multi-year drilling activities based on evaluation of applicable geologic, seismic, engineering, production and reserves information. There is no certainty that the Company will drill all unbooked drilling locations and if drilled there is no certainty that such locations will result in additional oil and gas reserves, resources or production. The drilling locations on which we actually drill wells will ultimately depend upon the availability of capital, regulatory approvals, seasonal restrictions, oil and natural gas prices, costs, actual drilling results, additional reservoir information that is obtained and other factors. While certain of the unbooked drilling locations may have been derisked by drilling existing wells in relative close proximity to such unbooked drilling locations, the majority of other unbooked drilling locations are farther away from existing wells where management has less information about the characteristics of the reservoir and therefore there is more uncertainty whether wells will be drilled in such locations and if drilled there is more uncertainty that such wells will result in additional oil and gas reserves, resources or production.

Description of the Company

Raging River was incorporated as 1646988 Alberta Ltd. pursuant to the *Business Corporations Act* (Alberta) on December 15, 2011 and subsequently changed its name to Raging River Exploration Inc. Raging River is a crude oil and natural gas exploration, development and production company based in Calgary, Alberta, Canada. The Company's operations are in the Viking oil resource play in western Canada, being primarily located in the Dodsland area in southwestern Saskatchewan and southeast Alberta.

Unless otherwise indicated herein, all production information presented herein is presented on a gross basis, which is the Company's working interest prior to deduction of royalties and without including any royalty interests.

Corporate Highlights

THIRD QUARTER 2016 HIGHLIGHTS

- Achieved average quarterly production of 18,612 boe/d (93% oil) representing a 20% production per share increase over the comparable period in 2015.
- The Company's exploration and development expenditures were \$58.9 million including \$58.4 million on drilling, completing and equipping activities and \$0.5 million on land. A total of 71.0 net Viking horizontal wells were drilled at a 100% success rate.
- The Company generated industry leading operating netbacks of \$30.93/boe and funds flow netbacks of \$29.10/boe on an unhedged basis.
- Recorded net earnings of \$6.8 million or \$3.96 per boe.
- Maintained balance sheet strength with third quarter exit net debt of \$140.2 million representing 0.7 times net debt to the third quarter annualized cash flow.
- Closed the \$109.3 million previously announced corporate acquisition of Rock Energy Inc. ("Rock Acquisition"). The Rock Acquisition included 2,550 boe/d (95% oil) of production and approximately 25 net sections of highly prospective land targeting Viking light oil in the Kerrobert area of southwest Saskatchewan.
- Subsequent to quarter end, Raging River has reaffirmed its existing \$300 million credit facilities.

Petroleum and Natural Gas Operations

Production and Pricing

	Three months ended September 30,		Percent Change	Nine months ended September 30,		Percent Change
	2016	2015		2016	2015

	<u>80,632</u>	<u>63,518</u>	27	<u>198,541</u>	<u>191,989</u>	3

The Company takes almost all of its working interest production "in kind" and it is marketed and sold through various credit-worthy commodity purchasers. Raging River's crude oil is marketed under a short-term (30 day) contract with a crude oil marketer and through major North American crude oil purchasers. All of the Company's natural gas is currently sold as spot gas through significant North American natural gas marketers. Commodity prices are affected by both domestic and international factors that are beyond the control of the Company. Prices received for light crude oil are determined by the quality of the crude compared to the benchmark price for Mixed Sweet Blend ("MSW") and Western Canadian Select ("WCS") for heavy crude oil.

In the three months ended September 30, 2016, the WTI price remained unchanged quarter over quarter, resulting in a minimal decrease in the Company's realized crude oil price and a consistent quality adjustment quarter over quarter. The Company's light crude oil price averaged \$50.87/bbl for the third quarter of 2016, down 3% from \$52.54/bbl in the third quarter of 2015 and the average quality adjustment to MSW pricing was \$3.83/bbl in the third quarter compared to \$3.70/bbl in the third quarter of 2015. Raging River's quality adjustments are related to our average oil being 35° API versus the 40° API WTI benchmark, yielding an approximate \$5/bbl differential to MSW.

In the nine month period ended September 30, 2016, the decline in the WTI, only partially offset by a weaker Canadian dollar resulted in a lower realized light crude oil price for the Company. Raging River's light crude oil price averaged \$45.52/bbl in the nine month period ended September 30, 2016, down 16% from the average price of \$53.90/bbl received in the comparable period of 2015. Raging River's average quality adjustment to MSW pricing remained consistent in the nine month period ended September 30, 2016 at \$4.51/bbl from \$4.70/bbl in the comparable period of 2015.

The Company's heavy crude oil price averaged \$37.66/bbl for the third quarter of 2016, down 4% from \$39.22/bbl in the third quarter of 2015. The Company's heavy crude oil price averaged \$35.65/bbl in the nine month period ended September 30, 2016, down 17% from the average price of \$42.83/bbl received in the comparable period of 2015. Raging River's average quality adjustment to WCS narrowed in both the three and nine month period ended September 30, 2016.

The AECO natural gas price declined in the three and nine months period September 30, 2016, due to above average input into storage from an oversupplied market as warmer weather persisted, therefore reducing demand, resulting in a downward pressure on natural gas pricing and a decrease in the natural gas price realized by the Company. Raging River's realized natural gas price for the three and nine month periods ended September 30, 2016 was \$2.06 per mcf and \$1.69 per mcf respectively, compared to \$2.82 per mcf and \$2.71 per mcf for the same periods in 2015.

Drilling

During the nine month period ended September 30, 2016, the Company drilled a total of 184 gross (169.4 net) wells resulting in 181 (166.4 net) crude oil wells, 2 (2.0 net) service well and 1.0 (1.0 net) dry and abandoned well for a success rate of 99%.

Production	Q3/16	Q2/16	Q1/16	Q4/15	Q3/15	Q2/15	Q1/15	Q4/14
Light oil and liquids (bbls/d)	15,643	14,603	15,034	14,021	12,805	12,664	12,704	11,675
Heavy oil (bbls/d)	1,738	171	154	173	204	192	166	384
Natural gas (mcf/d)	7,385	7,368	7,900	3,461	2,454	2,947	2,641	2,931
Total (boe/d)	18,612	16,002	16,505	14,771	13,418	13,347	13,310	12,548
% increase over prior quarter	16%	(3%)	12%	10%	1%	-	6%	18%
Production per 1 million shares (boe/d)	80.8	70.7	76.2	72.8	67.2	67.4	70.0	69.6
Per share % increase (decrease) over prior quarter	14%	(7%)	5%	8%	-	(4%)	1%	17%

The Company's production for the third quarter of 2016 increased to 18,612 boe/d from 13,418 boe/d in the third quarter of 2015, an increase of 39%. Quarter over quarter, production in the third quarter of 2016 of 18,612 boe/d increased 16% against production of 16,002 boe/d in the second quarter of 2016. The year over year increase of 39% was primarily attributable to a successful drilling program in 2015 and 2016 combined with the strategic property and corporate acquisitions. The Rock Acquisition that closed on July 21, 2016, contributed additional production volumes of approximately 1,800 boe/d in the third quarter of 2016.

Petroleum and natural gas revenue in the three month period September 30, 2016 was \$80.6 million as compared to \$63.5 million in the three month period September 30, 2015. This increase was attributable to a 39% increase in production volumes that was partially offset by an 8% decrease in commodity prices.

Petroleum and natural gas revenues in the nine month period September 30, 2016 was \$198.5 million, as compared to \$192.0 million in the nine month period September 30, 2015. The increase in revenue is primarily due the 28% increase in production volumes which was partially offset by the 19% decrease in commodity pricing.

Commodity Price Risk Management

Raging River, as part of our financial management strategy, has adopted a disciplined commodity hedging program. The objective of the hedging program is to reduce volatility in the financial results, protect acquisition economics and stabilize cash flow against the unpredictable commodity price environment. As the Company's production grows, our corporate hedging strategy will be restricted to a maximum hedge of 60% of the trailing month's actual production, allowing the Company to participate in commodity price increases while limiting exposure to declines in commodity prices. As of November 8, 2016, the Company has the following price contracts in place by quarter:

2016

Q4

Crude oil	Differential	Oct 2016 – Dec 2016	2,500 bbls/d	Cdn \$4.89/bbl	WTI/Edm
Natural gas	Fixed	Oct 2016 – Dec 2016	2,500 GJs/d	Cdn \$2.45/GJ	AECO

2017

Q1

Crude oil	Differential	Jan 2017 – Mar 2017	2,000 bbls/d	Cdn \$4.25/bbl	WTI/Edm
Natural gas	Fixed	Jan 2017 – Mar 2017	1,000 GJs/d	Cdn \$3.00/GJ	AECO

Q2

Crude oil	Differential	Apr 2017 – Jun 2017	3,000 bbls/d	Cdn \$4.12/bbl	WTI/Edm
Natural gas	Fixed	Apr 2017 – Jun 2017	500 GJs/d	Cdn \$3.00/GJ	AECO

Q3

Crude oil	Differential	Jul 2017 – Sept 2017	2,000 bbls/d	Cdn \$4.47/bbl	WTI/Edm
Natural gas	Fixed	Jul 2017 – Sept 2017	500 GJs/d	Cdn \$3.00/GJ	AECO

Q4

Crude oil	Differential	Oct 2017 – Dec 2017	2,000 bbls/d	Cdn \$4.47/bbl	WTI/Edm
Natural gas	Fixed	Oct 2017 – Dec 2017	500 GJs/d	Cdn \$3.00/GJ	AECO

Realized & Unrealized Gain/Loss on Commodity Contracts

The realized gain/loss represents the commodity contracts settled during the three and nine months ended September 30, 2016. The Company's oil commodity contracts are referenced to the WTI price and settled in Canadian dollars, therefore the realized gains and losses fluctuate based on changes in the WTI price and \$US/\$Cdn exchange rate. The Company's natural gas commodity contracts are referenced to the AECO daily and monthly index.

For the three month period ended September 30, 2016, the Company incurred a realized loss of \$89 thousand (three months ended September 30, 2015 - realized gains of \$993 thousand). The Company realized losses in oil commodity contracts as the pricing differential narrowed in the period. This loss was partially offset by gains on natural gas hedges due to a low AECO price in the period.

For the nine month period ended September 30, 2016, the Company recorded a \$269 thousand gain (nine months ended September 30, 2015 - realized gain of \$3.3 million). This gain is attributable to the decrease in both the AECO index and the WTI benchmark price.

As of September 30, 2016, the fair value of Raging River's outstanding commodity contracts is an unrealized liability of \$750 thousand as reflected in the interim financial statements. The fair value or mark to market value of these contracts is based upon the estimated amount that would have been

received as at September 30, 2016, had the contracts been monetized or terminated. Subsequent changes in the fair value of the commodity contracts are recognized in the interim financial statements and could be materially different than what is recorded at September 30, 2016. The unrealized loss of \$965 thousand for the nine month period ended September 30, 2016, represents the fair value change of the underlying commodity contracts to be settled in the future. In comparison, an unrealized loss of \$1.6 million was recorded for the nine months ended September 30, 2015.

In the third quarter of 2016, the Company had unrealized losses of \$621 thousand compared to unrealized gains of \$1.1 million in the third quarter of 2015.

Royalties

	Three months ended September 30,		Percent Change	Nine months ended September 30,		Percent Change
	2016	2015		2016	2015	
	<i>(thousands of dollars)</i>			<i>(thousands of dollars)</i>		
Crown	1,642	1,318	25	3,927	3,904	1
Saskatchewan resource surcharge	1,487	859	73	3,673	3,202	15
Freehold and GORR	4,667	3,398	37	11,710	11,375	3
	<u>7,796</u>	<u>5,575</u>	40	<u>19,310</u>	<u>18,481</u>	4
Percent of total revenue	9.7%	8.8%	10	9.7%	9.6%	1
Per boe (\$)	4.55	4.52	1	4.13	5.07	(19)

Royalty expenses consist of royalties paid to provincial governments, freehold landowners, overriding royalty owners and the Saskatchewan resource surcharge. Royalties increased to \$7.8 million in the third quarter of 2016 from \$5.6 million in the third quarter of 2015 primarily due to a 39% increase in production volumes.

During the nine months ended September 30, 2016, royalties increased 4% to \$19.3 million from \$18.5 million in the comparable period. The increase is again primarily a result of a 28% increase in production volumes. The Company's average royalty rate of 9.7% in the nine month period ended September 30, 2016 was consistent with the royalty rate for the comparable period in 2015.

Operating Expenses

	Three months ended September 30,		Percent Change	Nine months ended September 30,		Percent Change
	2016	2015		2016	2015	
Total operating costs (\$000's)	17,379	11,288	54	43,902	37,878	16
Percent of total revenue	21.6%	17.8%	21	22.1%	19.7%	12
Per boe (\$)	10.15	9.14	11	9.40	10.39	(10)

During the three months ended September 30, 2016, operating expenses increased 54% to \$17.4 million compared to \$11.3 million in the same period of 2015. During the nine months ended September 30, 2016, operating expenses increased 16% to \$43.9 million compared to \$37.9 million in 2015. The increase in total operating costs is primarily due to the increase in production volumes in both the three and nine month periods ended September 30, 2016.

Operating costs averaged \$10.15/boe in the third quarter of 2016 and \$9.40/boe in the year to date. This represents an increase 11% or \$1.01/boe from \$9.14/boe in the third quarter of 2015 and a decrease of 10% or \$0.99/boe from \$10.39/boe in the nine months ended September 30, 2015. The increase in per boe costs for the three months ended September 30, 2016 compared to the same period of the previous

year is due to the heavy oil properties acquired as part of the Rock Acquisition, that carry higher operating costs than Raging River's historical average.

Transportation Expenses

	Three months ended September 30,		Percent Change	Nine months ended September 30,		Percent Change
	2016	2015		2016	2015	
Total transportation costs (\$000's)	2,502	1,691	48	6,584	4,996	32
Percent of total revenue	3.1%	2.7%	15	3.3%	2.6%	27
Per boe (\$)	1.46	1.37	7	1.41	1.37	3

Transportation expenses relate to the cost of transporting natural gas and hauling crude oil to the point of sale. Transportation costs increased to \$2.5 million in the third quarter of 2016 from \$1.7 million in the third quarter of 2015, an increase of 48%. During the nine months ended period September 30, 2016, transportation costs increased 32% to \$6.6 million from \$5.0 million in the comparable period. The increase in transportation costs is primarily due to the increase in production volumes in both the three and nine month periods ended September 30, 2016.

Transportation costs averaged \$1.46/boe in the third quarter of 2016 and \$1.41/boe in the year to date. This represents an increase of 7% from \$1.37/boe in the third quarter of 2015 and an increase of 3% from \$1.37/boe in the nine months ended September 30, 2015. The increase in per boe costs is attributable to higher clean oil trucking costs associated with the properties acquired through the Rock Acquisition.

General and Administrative ("G&A") Expenses

	Three months ended September 30,		Percent Change	Nine months ended September 30,		Percent Change
	2016	2015		2016	2015	
	<i>(thousands of dollars)</i>			<i>(thousands of dollars)</i>		
General and administrative	2,991	2,435	23	8,473	7,143	19
Overhead recoveries	(308)	(430)	(28)	(812)	(739)	10
Capitalized G&A	(711)	(551)	29	(2,051)	(1,733)	18
	<u>1,972</u>	<u>1,454</u>	36	<u>5,610</u>	<u>4,671</u>	20
Percent of total revenue	2.4%	2.3%	4	2.8%	2.4%	17
Per boe (\$)	1.15	1.18	(3)	1.20	1.28	(6)

The Company incurred gross G&A expenses of \$3.0 million and \$8.5 million, respectively, during the three and nine month periods ended September 30, 2016. Increased general and administrative costs before recoveries and capitalization were mainly the result of increased costs in consulting fees, increase in head office staff and software fees to accommodate the Company's capital expenditure program and the larger operations resulting from significant increases in production. Higher consulting fees were driven by increased personnel required to facilitate the integration of the Rock Acquisition. Higher salary costs were driven by increased personnel primarily technical and operations staff.

Net G&A expenses incurred were \$2.0 million or \$1.15 per boe and \$5.6 million or \$1.20 per boe, respectively, during the three and nine month periods ended September 30, 2016. The decrease in net

G&A per boe from the comparable periods is a result of efficiencies achieved with the higher production levels.

Financial Charges

	Three months ended September 30,			Nine months ended September 30,		
	2016	2015	Percent Change	2016	2015	Percent Change
Financial charges (\$000's)	1,078	873	23	2,981	2,638	13
Percent of total revenue	1.3%	1.4%	(7)	1.5%	1.4%	7
Per boe (\$)	0.63	0.71	(11)	0.64	0.72	(11)

Financial charges during the three and nine month periods ended September 30, 2016, were \$1.1 million and \$3.0 million respectively compared to \$873 thousand and \$2.6 million respectively for 2015. Interest on bank debt increased in the three month periods ended September 30, 2016, due to carrying higher average debt levels primarily a result of the debt assumed from the Rock Acquisition. As at September 30, 2016 the Company had drawn \$99.9 million against the available credit facility of \$300 million.

Stock-based Compensation

	Three months ended September 30,			Nine months ended September 30,

Percent of total revenue	2.2%	2.1%	5	2.7%	2.1%	29
Per boe (\$)	1.03	1.10	(6)	1.14	1.11	3

Stock based compensation expense during the three and nine month periods ended September 30, 2016, were \$1.8 million and \$5.3 million respectively compared to \$1.4 million and \$4.0 million respectively for 2015. Stock based compensation expense increased primarily due to the grant of additional stock options and the grants associated with the new Award Plan (as defined below).

Stock options

During the second quarter of 2016, the shareholders of the Company approved a new stock option plan ("New Option Plan"). Stock options that have been granted under the New Option Plan have a term of 3.5 years to expiry and have a three year vesting period from the date of grant. The stock-based compensation relating to options is accounted for using the fair value method of accounting. The expense associated with stock options is driven by the timing and valuation of stock option grants.

As at September 30, 2016, the Company had a total of 9.1 million stock options outstanding with a weighted average fair value of \$2.55 per stock option.

Award Plan

During the second quarter of 2016, the shareholders of the Company approved the awards plan consisting of restricted share units ("RSUs") and performance share units ("PSUs") whereby units may be granted to officers, employees and consultants of the Company. The maximum number of common

shares issuable under the plan shall not at any time exceed the lesser of: (i) 5 percent of the total common shares less the aggregate number reserved for issuance pursuant under the new stock option plan and (ii) 6.5 percent of the total common shares outstanding less the aggregate number of common shares reserved for issuance pursuant to the old stock options. Currently one third of the RSUs will vest on each of the first, second and third anniversaries of the date of grant. PSUs will vest three years after the grant, unless otherwise determined by the board and are adjusted based on a payout multiplier. The payout multiplier ranges from 0 to 2 and is based on corporate performance measures determined by the board.

RSUs and PSUs are measured at fair value using the closing trading price on the date of grant. The resulting stock-based compensation expense is recognized over the vesting period with the corresponding increase to contributed surplus. Upon the exercise, the associated amount in contributed surplus is recorded as an increase to share capital. A forfeiture rate is estimated on the grant date and is adjusted to reflect the actual number of shares that vest.

As at September 30, 2016, the Company had 155,150 RSUs and 248,450 PSUs outstanding.

Deferred Share Units (“DSUs”)

On April 4, 2016, the board of directors of the Company approved the adoption of the DSU plan. DSUs are granted to non-employee directors. Each DSU vests on the date of grant, however, settlement of the DSU occurs when the individual ceases to be a director of the Company. DSUs are to be settled in cash or by payment in common shares acquired through the facilities of the Toronto Stock Exchange. The directors may also elect to receive all of their annual cash compensation in the form of DSUs provided that such election must be made on December 1st of the preceding calendar year (or within certain prescribed time frame if an individual becomes a director after the commencement of a calendar year) and after such date the election will be irrevocable for such year.

DSUs are measured at fair value using the closing trading price on the date of grant.

As at September 30, 2016, the Company had 49,712 DSUs outstanding.

Depletion, Depreciation and Accretion

	Three months ended September 30,		Percent Change	Nine months ended September 30,		Percent Change

Per boe (\$) – Depletion and depreciation	22.27	23.09	(4)	22.33	23.00	(3)
Per boe (\$) – Exploration and evaluation lease expiries	0.17	-	100	0.64	0.69	(7)

Depletion of oil and gas assets is provided on the “unit-of–production” method based on total proved and probable reserves, including future development costs, on a component basis. Depletion and depreciation expense increased to \$37.8 million and \$103.2 million respectively for the three and nine month periods ended September 30, 2016. The increase in depletion expense is a result of an increase in production volumes, combined with a large increase to the capital base from capital expenditures from

an intensive drilling program and the Rock Acquisition that closed in July 2016. The per boe depletion and depreciation rate remained consistent for both the three and nine month periods ended September 30, 2016, as capital additions were offset by reserve additions.

Accretion increased in the third quarter of 2016 to \$375 thousand from \$287 thousand in the comparable quarter of 2015. This increase is primarily due to the increase in asset retirement obligations from drilling and acquisition activities. Accretion represents the time value of the asset retirement obligation and is calculated at the Company's risk-free rate, currently 2%. It will continue to increase with the passage of time and the increases in asset retirement obligations.

During the nine month period ended September 30, 2016, \$3.0 million of costs associated with expired mineral leases were recognized as exploration and evaluation expense in the statement of comprehensive earnings. In comparison, \$2.5 million of lease expiries were recorded in the nine month period ended September 30, 2015. The majority of lease expiries are comprised of Saskatchewan crown land leases which come up for renewal annually in the first quarter of the year.

Asset Retirement Obligations

As at September 30, 2016, the asset retirement obligations of the Company were \$90.5 million. The Company recorded an increase of \$25.6 million in the obligation from the asset retirement obligation of \$64.9 million as at December 31, 2015. This is related to the capital exploration and development program combined with liabilities of \$8.7 million acquired from the Rock Acquisition and an upward revision to the estimate. The Company recorded a revision to estimated asset retirement obligations of \$6.6 million (December 31, 2015 - \$8.7 million) in the year due to a combination of discounting future cost estimates at a lower rate than in prior periods which resulted in an increase of \$3.0 million (December 31, 2015 - \$1.7 million) and the revaluation of asset retirement obligations acquired. Asset retirement obligations acquired as part of an acquisition are initially measured at fair value using a credit-adjusted risk-free rate. The revaluation using a risk-free rate at the end of the period resulted in an increase of \$3.6 million (December 31, 2015 - \$7.0 million).

Income Taxes

The Company recorded a deferred income tax provision of \$2.3 million and \$6.0 million respectively for the three and nine month periods ended September 30, 2016.

The Company recorded a current tax recovery of \$3.4 million for the nine month period ended September 30, 2016. Based on the current forecast commodity prices, the Company does not expect to pay cash taxes in 2016.

Funds Flow from Operations and Net Earnings

The Company's funds flow from operations and net earnings generating capability are a direct result of production, commodity prices, and the cost to find and produce reserves. In the nine month period of operations ended September 30, 2016, Raging River recorded funds flow from operations of \$123.6 million and net earnings of \$4.2 million. This decrease from the 2015 results with funds flow from operations of \$126.6 million and net earnings of \$23.8 million is due primarily to the decline in commodity pricing which was partially offset by increased production volumes and lower cash costs per boe.

The following table summarizes the operating netback, funds flow from operations and net earnings on a barrel of oil equivalent basis:

	Three months ended		Percent Change	Nine months ended		Percent Change
	September 30, 2016	September 30, 2015		September 30, 2016	September 30, 2015

Total invested capital	168,224	49,760	238	269,331	167,284	61

(1) The total cost of the Rock Acquisition includes \$41.1 million of common share consideration based on a closing price of \$10.56 per common share of Raging River and \$68.2 million of net debt assumed.

Exploration and development capital

In the third quarter of 2016, Raging River drilled a total of 85 (71.0 net) crude oil wells and 1 (1.0 net) service well with a success rate of 100%. In the nine months period ended September 30, 2016, Raging River drilled a total of 184 (169.4 net) wells. This included 181 (166.4 net) crude oil wells, 2 (2.0 net) service well and 1 (1.0 net) dry and abandoned well for an overall success rate of 99%. By comparison, the Company drilled a total of 67 (64.6 net) wells in the third quarter of 2015 and 163 (153.9 net) wells in the nine month period ended September 30, 2015.

In the three months ended September 30, 2016, the Company invested a total of \$58.9 million on capital expenditures including \$58.4 million on drilling, completing, and equipping activities and \$533 thousand on land and geological and geophysical costs.

During the nine month period ended September 30, 2016, the Company spent \$134.9 million on capital expenditures including \$131.7 million on drilling, completions and production facilities and \$3.2 million on land, and geological and geophysical costs.

Corporate and property acquisitions

Rock Acquisition

On July 21, 2016, the Company closed the Rock Acquisition for total consideration of approximately \$109.3 million, comprised of 3.9 million common shares of Raging River at a closing price of \$10.56 and the assumption of \$68.2 million of net debt.

The acquisition includes 2,550 boe/d (95% oil) of production and approximately 25 net sections of highly prospective land targeting Viking light oil in the Kerrobert area of southwest Saskatchewan complementary to Raging River's existing Viking assets. The Viking light oil drilling inventory associated with the acquisition includes over 200 net Viking horizontal unbooked drilling locations identified by Raging River. In addition to the Viking assets, Raging River also acquired interests in low decline, heavy oil assets, which include a recently initiated polymer flood at Mantario and legacy water floods at Onward, both in southwest Saskatchewan.

Forgan land consolidation

During the second quarter of 2016, the Company closed this property acquisition for \$25.1 million. The property acquisition consisted of 30 net sections of crown land and 100 bbls/d of Viking light oil production.

Drilling Activity

The following table summarizes our drilling results:

	Three months ended September 30,				Nine months ended September 30,			
	2016		2015		2016		2015	
	Gross	Net	Gross	Net	Gross	Net	Gross	Net

(1) Does not include service well.

Liquidity and Capital Resources

At September 30, 2016, the Company had net debt of \$140.2 million compared to net debt of \$139.9 million at December 31, 2015. For the nine months ended September 30, 2016, funds flow from operations of \$123.6 million combined with common share issuances for net proceeds of \$102.5 million, stock option proceeds of \$1.9 million less capital expenditures of \$221.3 million and the assumption of \$7.0 million working capital deficit on the Rock Acquisition resulted in the ending net debt of \$140.2 million. The Company expects to have adequate liquidity to fund the 2016 capital expenditure budget of \$220 million through a combination of funds flow from operations and the \$300 million syndicated credit facility. Raging River anticipates that it will make use of additional bank debt or equity financing for any substantial expansion in its capital program or to finance any significant acquisitions.

Capital Resources

(\$ thousands)	September 30,	
	2016	2015
Capital Resources		
Bank debt available	300,000	300,000
Net debt	(140,187)	(103,659)
Total capital resources available	158,813	196,341

Changes to share capital in 2016 were the following:

On July 21, 2016, the Company completed the Rock Acquisition through the issuance of 3.9 million common shares valued at the closing price on July 21, 2016 of \$10.56 per share.

During the nine months ended September 30, 2016, 1.5 million stock options were exercised for 692.3 thousand common shares on a cash-less basis and 529 thousand stock options were exercised for 529 thousand common shares for gross proceeds of \$1.9 million.

On March 9, 2016, the Company completed a bought deal financing for gross proceeds of \$108.1 million and issued 12.5 million common shares at a price of \$8.65 per common share.

Asset retirement obligation	(0.05)	(0.04)	(0.03)	(0.06)	-	-	(0.02)	(0.09)
Current taxes	-	0.34	1.93	-	-	-	-	(1.82)
Funds flow netback ⁽³⁾ (\$/boe)	29.05	30.21	19.91	29.96	35.33	40.79	27.95	49.99

(1) Management uses funds flow from operations to analyze operating performance and leverage. Funds flow from operations as presented does not have any standardized meaning prescribed by IFRS and therefore it may not be comparable with the calculation of similar measures for other entities. The reconciliation between funds flow from operations and cash flow from operating activities can be found in this MD&A.

(2) Boe conversion ratio for natural gas of 1 Boe: 6 Mcf has been used, which is based on an energy equivalency conversion method primarily applicable at the burner tip and does not necessarily represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a conversion on a 6:1 basis may be misleading as an indication of value.

(3) Funds flow netbacks are calculated as the operating netback less general and administrative expenses, financial charges asset retirement obligations, transaction costs and current taxes.

(4) Excludes unrealized risk management contracts.

The fluctuations in Raging River's revenue, funds flow from operations and net earnings from quarter to quarter are primarily due to increases in production volumes, changes in realized commodity pricing and the related impact on royalties. With the commencement of operations in the latter part of the first quarter

of 2012, and continuing through into 2016, the Company has maintained an active capital expenditure program combined with property acquisitions and corporate acquisitions. The declining commodity pricing environment has translated into a decline of revenue, funds flow from operations and earnings in the first half of 2016. The decline in commodity pricing was more than offset by an increase in production levels in the third quarter of 2016 which resulted in the increase of revenue, funds flow from operations and net earnings. The Rock Acquisition that closed in July 2016, contributed approximately 1,800 boe/d to the production volume increase in the third quarter of 2016. Please refer to the Financial and Operating Results section of this MD&A for detailed discussions of changes in the third quarter of 2016.

Business Environment and Risk

The business risks the Company is exposed to are those inherent in the oil and gas industry as well as those governed by the individual nature of Raging River's operations. Geological and engineering risks, the uncertainty of discovering commercial quantities of new reserves, commodity prices, interest rate and foreign exchange risks, competition and government regulations – all of these govern the business and influence the controls and management at the Company. Raging River manages these risks by:

- attracting and retaining a team of highly qualified and motivated professionals who have a vested interest in the success of the Company;
- operating properties in order to maximize opportunities;
- employing risk management instruments to minimize exposure to volatility of commodity prices, interest rate and foreign exchange rates;
- maintaining a strong financial position; and
- maintaining strict environmental, safety and health practices

For additional details on the risks relating to Raging River's business, see "Risk Factors" in the Company's most recent annual information form, which is available on SEDAR at www.sedar.com.

Disclosure Controls and Procedures

The Chief Executive Officer ("CEO") and the Chief Financial Officer ("CFO") have designed, or caused to be designed under their supervision, disclosure controls and procedures as defined in National Instrument 52-109 – *Certification of Disclosure in Issuers' Annual and Interim Filings* ("NI 52-109") of the Canadian Securities Administrators, to provide reasonable assurance that: (i) information required to be disclosed by an issuer in its annual filings, interim filings or other reports filed or submitted under securities legislation is accumulated and communicated to the Company's management, including CEO and CFO, as appropriate to allow timely decisions regarding required disclosure; and (ii) information required to be disclosed by the Company in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation.

Internal Controls over Financial Reporting

The CEO and the CFO of Raging River have designed, or caused to be designed under their supervision, internal controls over financial reporting ("ICFR") as defined in NI 52-109. The control framework Raging River's officers used to design the Company's ICFR is the Internal Control - Integrated Framework (2013) ("COSO Framework") published by The Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). There have been no changes in the Company's internal controls over financial reporting during the interim period from July 1, 2016 to September 30, 2016 that have materially affected, or are reasonably likely to materially affect the Company's internal controls over financial reporting.

It should be noted that while Raging River's CEO and CFO believe that the Company's internal controls and procedures provide a reasonable level of assurance and that they are effective, they do not expect that these controls will prevent all errors or fraud. A control system, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

Application of Critical Accounting Estimates

Use of estimates and judgments

The preparation of financial statements requires management to make estimates and use judgment regarding the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities as at the date of the financial statements and the reported amounts of revenues and expenses during the period. By their nature, estimates are subject to measurement uncertainty and changes in such estimates in future periods could require a material change in the financial statements. Accordingly, actual results may differ from the estimated amounts as future confirming events occur.

Estimates and their underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the year in which the estimates are revised and for any future years affected.

a) Critical Judgments in Applying Accounting Policies

Determination of cash-generating units ("CGU") and impairment

The determination of what constitutes a CGU used to test the recoverability of development and production asset carrying values is subject to management judgment. Judgments are made in regards to shared infrastructure, geographical proximity, petroleum type and similar exposure to market risk and materiality. The asset composition of a CGU can directly impact the recoverability of the assets included therein. The key estimates used in the determination of cash flows from oil and natural gas reserves include the following:

- i) Reserves – assumptions that are valid at the time of reserve estimation may change significantly when new information becomes available. Changes in forward price estimates, production levels or results of future drilling may change the economic viability of reserves and may ultimately result in reserves being restated.
- ii) Oil and natural gas prices – forward price estimates are used in the cash flow model. Commodity prices can fluctuate for a variety of reasons including supply and demand fundamentals, inventory levels, exchange rates, weather, and economic and geopolitical factors.
- iii) Discount rate – the discount rate used to calculate the net present value of cash flows is based on estimates of an approximate industry peer group weighted average cost of capital. Changes in the general economic environment could result in significant changes to this estimate.

Judgments are required to assess when impairment indicators exist and impairment testing is required. In determining the recoverable amount of assets, in the absence of quoted market prices, impairment tests are based on estimates of reserves, production rates, future oil and natural gas prices, future costs, discount rates, market value of land and other relevant assumptions.

Exploration and evaluation ("E&E") assets

The application of the Company's accounting policy for E&E assets requires management to make certain judgments as to future events and circumstances as to whether economic quantities of reserves

have been found. Judgment is also required to determine the level at which E&E is assessed for impairment; for Raging River, the recoverable amount of E&E assets is assessed at the CGU level.

Deferred income taxes

Judgments are made by management to determine the likelihood of whether deferred income tax assets at the end of the reporting year will be realized from future taxable earnings.

b) Key Sources of Estimation Uncertainty

Business combinations

In a business combination, management makes estimates of the fair value of assets acquired and liabilities assumed, which includes assessing the value of oil and natural gas properties based on the estimation of recoverable quantities of proved plus probable reserves being acquired.

Valuation of property and equipment/Reserves

The valuation of property and equipment involves the estimation of proved plus probable reserves and includes assumptions regarding future commodity prices, exchange rates, discount rates, future development costs and production and transportation costs for future cash flows as well as the interpretation of complex geological and geophysical models and data. Changes in reported reserves can affect the impairment of assets, the decommissioning obligations, the economic feasibility of exploration and evaluation assets and the amounts reported for depletion, depreciation and amortization of property, plant and equipment. These reserve estimates are verified by third-party professional engineers, who work with information provided by the Company to establish reserve determinations in accordance with National Instrument 51-101 – *Standards of Disclosure for Oil and Gas Activities*. Accordingly, the impact to the financial statements in future years could be material.

Asset retirement obligations

Amounts recorded for asset retirement obligations and the related accretion expense requires the use of estimates with respect to the amount and timing of abandonment expenditures. Other provisions are recognized in the year when it becomes probable that there will be a future cash outflow.

Valuation of derivative financial instruments

The estimated fair values of derivative financial instruments resulting in financial assets and liabilities, by their very nature are subject to measurement uncertainty.

Measurement of share-based compensation

The estimated fair value of stock options uses pricing models such as the Black-Scholes model which is based on significant assumptions such as volatility, forfeiture rates and the expected term. The fair value of RSUs, PSUs and DSUs is estimated based on the trading price on the day of grant. Judgment is required to estimate the number of RSUs, PSUs and DSUs that will ultimately vest.

Income taxes

Tax interpretations, regulations and legislation in the various jurisdictions in which the Company operates are subject to change. As such, income taxes are subject to measurement uncertainty.

Summary of Significant Accounting Policies

The Company's accounting policies are described in Note 3 to the December 31, 2015 audited annual financial statements, except as noted below. Those accounting policies have been applied consistently to all periods presented in the Company's interim financial statements.

Future accounting pronouncements

IFRS 9 Financial Instruments, is intended to replace IAS 39 Financial Instruments: Recognition and Measurement and uses a single approach to determine whether a financial asset is measured at amortized cost or fair value, replacing the multiple rules in IAS 39. For financial liabilities designated at fair value through profit or loss, a company can recognize the portion of the change in fair value related to the change in the company's own credit risk through other comprehensive income rather than profit or loss. The new standard also requires a single impairment method to be used, replacing the multiple impairment methods in IAS 39, and incorporates new hedge accounting requirements. The new standard is effective for annual periods beginning on or after January 1, 2018, with early adoption permitted. Management is currently assessing the potential impact of the adoption of IFRS 9 on the Company's financial statements.

IFRS 15 Revenue from Contracts with Customers, provides clarification for recognizing revenue from contracts with customers and establishes a single revenue recognition and measurement framework that applies to contracts with customers. The new standard is effective for annual periods beginning on or after January 1, 2017, with early adoption permitted. The IASB has proposed to defer the adoption date to January 2018. Management is currently assessing the potential impact of the adoption of IFRS 15 on the Company's financial statements.

IFRS 16 Leases, which replaces IAS 17 Leases was issued in January 2016. For lessees applying IFRS 16, a single recognition and measurement model for leases would apply, with required recognition of assets and liabilities for most leases. The standard will come into effect for annual periods beginning on or after January 1, 2019, with earlier adoption permitted if the entity is also applying IFRS 15 Revenue from Contracts with Customers. Management is currently assessing the potential impact of the adoption of IFRS 16 on the Company's financial statements.
